

Intermediate Psychotherapeutic Intervention with IPET

Build on the foundation of “Introduction to Psychotherapy with IPET” to further develop the understanding and implementation of IPET, including coordination with other theoretical approaches.

This 4-hour workshop teaches the application of the Interpersonal Equine Therapy© (IPET) model with various theoretical orientations in psychology and psychiatry. This is an in-depth study that develops an understanding of various theoretical approaches juxtaposed with the IPET circumplex model. Participants will obtain a greater comprehension of analysis, technique, and intervention with IPET, both independently and used in conjunction with other theoretical approaches.

Prerequisite: Introduction to Psychotherapy with IPET
